Elevated levels of measles antibodies in children with autism. - PubMed - NCBI

Pediatr Neurol. 2003 Apr;28(4):292-4. Research Support, Non-U.S. Gov't

www.ncbi.nlm.nih.gov

.....

A study published in the Journal of Biomedical Sciences determined that the autoimmunity to the central nervous system may play a causal role in autism. Researchers discovered that because many autistic children harbour elevated levels of measles antibodies, they should conduct a serological study of measles-mumps-rubella (MMR) and myelin basic protein (MBP) autoantibodies. They used serum samples of 125 autistic children and 92 controlled children. Their analysis showed a significant increase in the level of MMR antibodies in autistic children. The study concludes that the autistic children had an inappropriate or abnormal antibody response to MMR. The study determined that autism could be a result from an atypical measles infection that produces neurological symptoms in some children. The source of this virus could be a variant of MV, or it could be the MMR vaccine.

Herd Immunity

<http://www.vaccinationcouncil.org/2012/02/18/the-deadly-impossibility-of-herd-immunity-through-vaccination-by-dr-russell-blaylock/>

The term, 'herd immunity', was coined by researcher, A W Hedrich, after he'd studied the epidemiology of measles in USA between 1900-1931. His study published in the May, 1933

American Journal of Epidemiology concluded that when 68% of children younger than 15 yrs old had become immune to measles via infection, measles epidemics ceased. For several reasons, this natural, pre-vaccine herd immunity differed greatly from today's vaccine 'herd immunity'.^{1,2}

When immunity was derived from natural infection, a much smaller proportion of the population needed to become immune to show the herd effect; compare the 68% measles immunity required for natural herd immunity to the very high percentages of vaccine uptake deemed necessary for measles vaccine 'herd immunity'. In his 'Vaccine Safety Manual', Neil Z Miller cites research which concluded increasing vaccine uptake necessary for 'herd immunity' ranging from "70 to 80 percent of two year olds in inner cities" in 1991 to "close to 100 percent coverage'...with a vaccine that is 90 to 98 percent effective." in 1997. Miller notes that, "When the measles vaccine was introduced in 1963, officials were confident that they could eradicate the disease by 1967."

Subsequently, new dates for eradication were pronounced as 1982, 2000 and 2010. Meanwhile, "In 1990, after examining 320 scientific works from around the world, 180 European medical doctors concluded that 'the eradication of measles...would today appear to be an unrealistic goal.'" And in 1984, Professor D. Levy of Johns Hopkins University had already "concluded that if current practices [of suppressing natural immunity] continue, by the year 2050 a large part of the population will be at risk and 'there could in theory be over 25,000 fatal cases of measles in the U.S.A.'"

Disease-conferred immunity usually lasted a lifetime. As each new generation of children contracted the infection, the immunity of those previously infected was renewed due to their continual cyclical re-exposure to the disease; except for newly-infected children and the few individuals who'd never had the disease or been exposed to it, the 'herd immunity' of the entire population was maintained at all times.

Vaccine 'herd immunity' is hit-and-miss; outbreaks of disease sometimes erupt in those who follow recommended vaccine schedules. If they do actually "immunize", vaccines provide only short-term immunity so, in an attempt to maintain 'herd immunity', health authorities hold 'cattle drives' to round up older members of the 'herd' for administration of booster shots. And on it goes, to the point that, now, it's recommended we accept cradle-to-grave shots of vaccine against pertussis, a disease which still persists after more than sixty years of widespread use of the vaccine.

Russell Blaylock, MD remarks, "One of the grand lies of the vaccine program is the concept of "herd immunity". In fact, vaccines for most Americans declined to non-protective levels within 5 to 10 years of the vaccines. This means that for the vast majority of Americans, as well as others in the developed world, herd immunity doesn't exist and hasn't for over 60 years."³

In the pre-vaccine era, newborns could receive antibodies against infectious diseases from their mothers who had themselves been infected as children and re-exposed to the diseases later in

life. Today's babies born to mothers who were vaccinated and never exposed to these diseases do not receive these antibodies. In direct contrast to fear mongering disease "facts" and 'herd immunity' theories related by Public Health, most of today's babies are more vulnerable than babies of the pre-vaccine era.

"Q: Doesn't herd immunity protect most people?

A: Herd immunity (or community immunity) is a situation in which, through vaccination or prior illness, a sufficient proportion of a population is immune to an infectious disease, making its spread from person to person unlikely. Even individuals not vaccinated (such as newborns and those with chronic illnesses) are typically protected because the disease has little opportunity to spread within their community. Since pertussis spreads so easily, vaccine protection decreases over time, and acellular pertussis vaccines may not prevent colonization (carrying the bacteria in your body without getting sick) or spread of the bacteria, we can't rely on herd immunity to protect people from pertussis." <<https://www.cdc.gov/pertussis/about/faqs.html#increasing>>

Questions to ask your doctor/ped regarding vaccinations:

Question-1: If measles vaccines confer measles immunity, then why do already-vaccinated children have anything to fear from a measles outbreak?

Question-2: If vaccines work so well, then why did Merck virologists file a False Claims Act with the U.S. government, describing the astonishing scientific fraud of how Merck faked its vaccine results to trick the FDA?

Question-3: If vaccines don't have any links to autism, then why did a top CDC scientist openly confess to the CDC committing scientific fraud by selectively omitting clinical trial data after the

fact in order to obscure an existing link between vaccines and autism?

Question-4: If mercury is a neurotoxic chemical, then why is it still being injected into children and pregnant women via vaccines? Why does the vaccine industry refuse to remove all the mercury from vaccines in the interests of protecting children from mercury?

Question-5: If vaccines are so incredibly safe, then why does the vaccine industry need absolute legal immunity from all harm caused by its products?

Question-6: If vaccines work so well to prevent disease, then why do some vaccines (like the chickenpox vaccine) openly admit that they can cause the spread of chickenpox?

Question-7: If vaccines are so great for public health, then why do these historical public health charts show nearly all the declines in infectious disease taking place BEFORE vaccines arrived on the scene?

Question-8: If vaccines are perfectly safe, then why did at least 13 people recently die in Italy after being vaccinated?

Question-9: If vaccines are so trustworthy, then why did a pro-vaccine group in Africa recently discover — to its shock and horror — that vaccines being given to young African women were secretly laced with abortion chemicals?

Question-10: If vaccines are backed by solid science, then why do some vaccine inserts openly admit they are backed by no clinical trials?

Question-11: If vaccines are so safe, then why does this vaccine insert admit that the Gardasil vaccine causes “acute respiratory illness” in babies who consume the breast milk of mothers who have been vaccinated?

Question-12: If vaccines are so safe, then why does this Gardasil insert sheet admit that the vaccine causes “seizure-like activity, headache, fever, nausea and dizziness” and can even cause those injected with the vaccine to lose consciousness and fall, resulting in injury?

Question-13: If vaccines are backed by so much “science” then why do they frequently admit there really aren’t any studies of the vaccine for the very groups of people who are often injected with it?

Question-14: If vaccines are so safe to give to pregnant women, then why do the vaccine insert sheets openly admit most of them have never been tested for safety in pregnant women? In fact, this vaccine admits “the effects of the vaccine in foetal development are unknown.”

Question-15: If vaccines are so safe to be injected into the bodies of children and pregnant women, then why do their own insert sheets readily admit they are manufactured with

a cocktail of toxic chemical ingredients including “foetal bovine serum?” (The blood serum of aborted baby cows.)

Question-16: If vaccines achieve absolute immunity, then why are as many as 97 percent of children struck by infectious disease already vaccinated against that disease?

Question-17: If vaccines are totally safe and effective, then why did this five-year-old girl recently die from the very strain of flu she was just vaccinated against?

Question-18: If the mainstream media claims to report honest, unbiased information about vaccines, then why was there a total nationwide blackout on the news of the CDC whistle-blower admitting vaccines are linked to autism?

.....

1 . Look at vaccine inserts and vaccine excipients lists: fda.gov has a list of all vaccines and their ingredients. Research what those ingredients are, and the effect they have on the body, even in very small amounts. Realize that fetal DNA is present in vaccines, and research what effects fragmented DNA (especially of the opposite gender), have on a person. Learn all you can from scientists and other professionals - ones who have studied toxicology and immunology, as specifically:" related to vaccines.

2. Learn about The 1986 National Childhood Vaccine Injury Act. This Act made it so that vaccine manufacturers could no longer be sued for vaccine injuries. That's right, vaccine companies are not even liable for their products which have inherent, admitted, proven risk. Realize that the CDC vaccine schedule exploded from a handful of vaccines in 1 986, to 72 doses by age 5, present day, due to this released liability.

There is no incentive to make a safe vaccine.

3. Learn that the CDC childhood schedule has never ONCE been tested for safety. Not once. Also, no vaccine study has used a true placebo (which is the gold standard for testing). Vaccines are tested against aluminum-containing substances or other vaccines. There is no inert control substance, used in vaccine studies.

4. Learn that the very same company which promotes the childhood vaccine schedule (CDC) holds the patent for several vaccines. (Even my 6th grader knows the definition of the term, 'conflict of interest'.)

Study: The link between rotavirus vaccination and intussusception: implications for vaccine strategies. Rotovirus linked to fatal intestinal disorder in 1 in every 4670 infants. “There was also an increase in the risk of intussusception after the second dose of the vaccine... The strong association between vaccination with RRV-TV and intussusception among otherwise healthy infants supports the existence of a causal relation.”

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC1773072/>

Study: A two-phase study evaluating the relationship between Thimerosal-containing vaccine administration and the risk for an autism spectrum disorder diagnosis in the United States. “Epidemiological evidence supporting an association between... Thimerosal-containing childhood vaccines and the subsequent risk of an ASD diagnosis.”

<http://www.ncbi.nlm.nih.gov/pmc/articles/PMC3878266/>

Study: A positive association found between autism prevalence and childhood vaccination uptake across the U.S. population. “The higher the proportion of children receiving recommended vaccinations, the higher was the prevalence of AUT or SLI. A 1% increase in vaccination was associated with an additional 680 children having AUT or SLI. Neither parental behavior nor access to care affected the results, since vaccination proportions were not significantly related (statistically) to any other disability or to the number of pediatricians in a U.S. STATE.

The results suggest that although mercury has been removed from many vaccines, other culprits may link vaccines to autism.” <http://www.ncbi.nlm.nih.gov/pubmed/21623535>

Analysis: Commentary—Controversies surrounding mercury in vaccines: autism denial as impediment to universal immunization. “The risk of autism among African American children vaccinated before the age of 2 years was 340% that of those vaccinated later.”

<http://www.ncbi.nlm.nih.gov/pubmed/25377033>

Analysis: Methodological issues and evidence of malfeasance in research purporting to show thimerosal in vaccines is safe. <http://www.ncbi.nlm.nih.gov/pubmed/24995277>

Study: Abnormal measles-mumps-rubella antibodies and CNS autoimmunity in children with autism. Link between antibodies from MMR vaccine and central nervous system autoimmune dysfunction in children with autism. <http://www.ncbi.nlm.nih.gov/pubmed/12145534>

Study: Do aluminum vaccine adjuvants contribute to the rising prevalence of autism?

<http://www.ncbi.nlm.nih.gov/pubmed/22099159>

Study: What is regressive autism and why does it occur? Is it the consequence of multi-systemic dysfunction affecting the elimination of heavy metals and the ability to regulate neural temperature? “The related and damaging effect of exposure to high levels of mercury... a viable alternative explanation for the occurrence of regressive autism. The evidence indicates there is

alteration to chromosome structure and/or function.”

<http://www.ncbi.nlm.nih.gov/pmc/articles/PMC3364648/>

Case Series: A case series of children with apparent mercury toxic encephalopathies manifesting with clinical symptoms of regressive autistic disorders. Vaccine additives cause autism-like symptoms. <http://www.ncbi.nlm.nih.gov/pubmed/17454560>

Analysis: A comprehensive review of mercury provoked autism. “A comprehensive review of mercury-provoked autism. In conclusion, the overwhelming preponderance of the evidence favours acceptance that Hg exposure is capable of causing some ASDs.”

<http://www.ncbi.nlm.nih.gov/pubmed/19106436>

Analysis: Thimerosal Exposure and the Role of Sulfating Chemistry and Thiol Availability in Autism. Explanation of why some children are at greater risk of developing autism after vaccines.

“The evidence suggests that the abnormal sulfation chemistry, limited thiol availability, and decreased GSH reserve capacity could explain why the adverse effects of TM are greater in a subpopulation of children with this susceptibility...”

<http://www.ncbi.nlm.nih.gov/pmc/articles/PMC3774468/>

Evidence: B-Lymphocytes from a Population of Children with Autism Spectrum Disorder and Their Unaffected Siblings Exhibit Hypersensitivity to Thimerosal. “Certain individuals with a mild mitochondrial defect may be highly susceptible to mitochondrial specific toxins” found in vaccines, resulting in autism spectrum disorders.

<http://www.ncbi.nlm.nih.gov/pmc/articles/PMC3697751/>

Review: Theoretical aspects of autism: causes—a review. Autism linked to encephalitis (brain swelling) following vaccination. <http://www.ncbi.nlm.nih.gov/pubmed/21299355>

Hypotheses: Autism: a novel form of mercury poisoning.

<https://www.ncbi.nlm.nih.gov/pubmed/11339848>

Study: A prospective study of thimerosal-containing Rho(D)-immune globulin administration as a risk factor for autistic disorders. Link between autism and prenatal exposure to heavy metals via Rhogam shot in RH-negative mothers. “Children with ASDs (28.30%) were significantly more likely (odds ratio 2.35, 95% confidence interval 1.17-4.52, $p < 0.01$) to have Rh-negative mothers than controls (14.36%).” <http://www.ncbi.nlm.nih.gov/pubmed/17674242>

Study: Reduced levels of mercury in first baby haircuts of autistic children. Autistic children have difficulty excreting heavy metals like mercury, as evidenced by significantly lower levels of mercury in their hair. This points to a genetic susceptibility to autism in children who cannot effectively detox vaccine toxins. <http://www.ncbi.nlm.nih.gov/pubmed/12933322>

Analysis: A possible central mechanism in autism spectrum disorders, part 1. "A possible central mechanism in autism spectrum disorders... the link between excessive vaccination, use of aluminum and ethylmercury as vaccine adjuvants, food allergies, gut dysbiosis, and abnormal formation of the developing brain." <http://www.ncbi.nlm.nih.gov/pubmed/19043938>

Study: The role of mercury in the pathogenesis of autism. "The role of mercury [found in vaccines] in the pathogenesis of autism." <http://www.ncbi.nlm.nih.gov/pubmed/12142947>

Study: Transcriptomic analyses of neurotoxic effects in mouse brain after intermittent neonatal administration of thimerosal. Vaccine additives induce autistic behavior in mice. <http://www.ncbi.nlm.nih.gov/pubmed/24675092>

Study: Elevated levels of measles antibodies in children with autism. Vaccine-induced autoimmunity may cause autism. <http://www.ncbi.nlm.nih.gov/pubmed/12849883>

Study: A case series of children with apparent mercury toxic encephalopathies manifesting with clinical symptoms of regressive autistic disorders. Mercury toxic encephalopathy manifesting with clinical symptoms of regressive autistic disorders. <http://www.ncbi.nlm.nih.gov/pubmed/17454560>

Study: Mercury and autism: accelerating evidence? Relation of mercury to high autism rates in boys <http://www.ncbi.nlm.nih.gov/pubmed/16264412>

Survey Study: Acetaminophen (paracetamol) use, measles-mumps-rubella vaccination, and autistic disorder: the results of a parent survey. Tylenol following MMR Linked to Autism Study: <http://www.ncbi.nlm.nih.gov/pubmed/18445737>

Abstract: Impact of environmental factors on the prevalence of autistic disorder after 1979. Fetal and Retroviral Contaminants in Vaccines Linked to Autism and Cancer. "...Linear regression revealed that Varicella and Hepatitis A immunization coverage was significantly correlated to autistic disorder cases... Autistic disorder change points years are coincident with introduction of vaccines manufactured using human fetal cell lines, containing fetal and retroviral contaminants, into childhood vaccine regimens. This pattern was repeated in the US, UK, Western Australia and Denmark. Thus, rising autistic disorder prevalence is directly related to vaccines manufactured utilizing human fetal cells..." Abstract: <http://www.academicjournals.org/.../article-abst.../C98151247042>

Full Study: Impact of environmental factors on the prevalence of autistic disorder after 1979 <http://academicjournals.org/journal/JPHE/article-full-text-pdf/C98151247042>

Evidence: WHO Informal consultation on the application of molecular methods to assure the quality, safety, and efficacy of vaccines. Scientists have known for decades about the dangers

of insertional mutagenesis caused by using human fetal cell lines in vaccines. Instead of conducting safety studies, the FDA has ignored the dangers and merely regulates the amount of human DNA that can be present in a vaccine to no greater than 10ng—an amount that has not been proven safe.

Hypothesis: conjugate vaccines may predispose children to autism spectrum disorders.

<http://www.ncbi.nlm.nih.gov/pubmed/21993250>

Regression Analysis: A positive association found between autism prevalence and childhood vaccination uptake across the U.S. population. Rise in autism coincides perfectly with rise in vaccines. “The relationship between the proportion of children who received the recommended vaccines by age 2 years and the prevalence of autism (AUT) or speech or language impairment (SLI) in each U.S. state from 2001 and 2007 was determined. A positive and statistically significant relationship was found: The higher the proportion of children receiving recommended vaccinations, the higher was the prevalence of AUT or SLI.”

<http://www.ncbi.nlm.nih.gov/pubmed/21623535>

Study: A two-phase study evaluating the relationship between Thimerosal-containing vaccine administration and the risk for an autism spectrum disorder diagnosis in the United States. “the present study provides new epidemiological evidence supporting an association between increasing organic-Hg exposure from Thimerosal-containing childhood vaccines and the subsequent risk of an ASD diagnosis.”<http://www.ncbi.nlm.nih.gov/pmc/articles/PMC3878266/>

Study: Adverse events following immunization with vaccines containing adjuvants. Adverse events after vaccines containing adjuvants linked to autism and autoimmune conditions. “A traditional infectious disease vaccine is a preparation of live attenuated, inactivated or killed pathogen that stimulates immunity. Vaccine immunologic adjuvants are compounds incorporated into vaccines to enhance immunogenicity. Adjuvants have recently been implicated in the new syndrome named ASIA autoimmune/inflammatory syndrome induced by adjuvants.... The most frequent clinical findings were pyrexia 68%, arthralgias 47%, cutaneous disorders 33%, muscle weakness 16% and myalgias 14%. Three patients had diagnosis of Guillain-Barre syndrome, one patient had Adult-Still’s disease 3 days after vaccination. A total of 76% of the events occurred in the first 3 days post-vaccination. Two patients with previous autoimmune disease showed severe adverse reactions with the reactivation of their illness... Vaccines containing adjuvants may be associated with an increased risk of autoimmune/inflammatory adverse events following immunization. <http://www.ncbi.nlm.nih.gov/pubmed/23576057>

Study: Hair Toxic Metal Concentrations and Autism Spectrum Disorder Severity in Young Children. Higher heavy metals in hair samples from severely autistic children

<http://www.mdpi.com/1660-4601/9/12/4486>

Study: What is regressive autism and why does it occur? Is it the consequence of multi-systemic dysfunction affecting the elimination of heavy metals and the ability to regulate neural temperature? Subtle DNA changes and the overuse of vaccines in autism.

“There is a compelling argument that the occurrence of regressive autism is attributable to genetic and chromosomal abnormalities, arising from the overuse of vaccines, which subsequently affects the stability and function of the autonomic nervous system and physiological systems... This article explores the issues and concludes that sensory dysfunction and systemic failure, manifested as autism, is the inevitable consequence arising from subtle DNA alteration and consequently from the overuse of vaccines.”
